                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic immunogenic peptides are provided in which a universal immune CC stimulator is linked to a peptide or protein hapten containing B cell cand/or cytotoxic T lymphocyte epitopes, giving a product which causes CC potent immune responses to the coupled peptide or protein. The stimulator CC consists of (A) a promiscuous helper T cell epitope (Th) which elicits an CC sequence from the invasin protein of versinia. Spacer amino acid CC sequence from the invasin protein of versinia. Spacer amino acid CC domains and between the immune stimulator and hapten components. When the immune stimulator and hapten components when the CC containing immunogenic peptide as above which can be used as a potent CC vaccine for treating e.g. protestatic hyperplasia, androgen-dependent consign uterine tumours, recurrent functional ovarian cysts, (severe) cc induction of infertility. (Updated on 25-MAR-2003 to correct PN field.)
The present sequence is that of a synthetic immunogenic peptide derived from human LHRH. This is an example of peptides that can be used in claimed immunostimulatory complexes of the invention that are specifically adapted to act as adjuvant and as peptide immunogen stabiliser. The complexes comprise a CpG oligonucleotide and a biologically active peptide immunogen. The complex is particulate and c.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                The invention relates to an immunostimulatory complex specifically adapted to act as adjuvant and as a peptide immunogen stabiliser. The invention is useful for preparing a water-in-oil emulsion, suspension and vaccine. It is also useful for treating prostate cancer, hormone ablation, allergy, HIV infection, foot-and-mouth disease, etc. The present sequence is human LHRH immunogenic peptide used in the invention.
                                                                                                                                                                                                                                    Sequence 45

The present sequence represents a peptide immunogen comprising an invasin CC domain immunostimulatory peptide of Yersinia sp., a synthetic helper T CC cell (Th) epitope and a target antigen, luteinising hormone-releasing CC hormone (LHRH). The synthetic Th epitope is derived from a structured CC synthetic antigen library (SSAL) designated SSALI Th1. SSAL Th1 is CC modelled after a promiscuous epitope taken from the F protein of the CC modelled after a promiscuous epitope taken from the F protein of the CC measles virus. The peptide immunogens cause induction of a specific cc immune response to LHRH which is involved in regulation of specific cc spermatogenesis, ovulation, oestrus, sexual development and secretion of spermatogenesis, ovulation, oestrus, sexual development and excretion of ex hormones. Provision of a promiscuous T helper epitope (which is CC immunogenicity to the B cell epitopes of the target antigen and thus high CC invention are used to vaccinate against mammalian LHRH, for use as CC invention are used to vaccinate against mammalian LHRH, for use as CC of prostate or breast, also endometricles; to prevent boar taint (and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      lutelnising hormone-releasing hormone; spermatogenesis; ovulation; oestrus; sexual development; sex hormone; promiscuous T helper epitope; vaccine; contraceptive; hormone-dependent tumour; prostate cancer; breast cancer; endometriosis; boar taint; meat quality; invasin domain;

                    protein (CETP) or HIV epitopes, but more generally against any pathogen, immunoreactive self-antigen or tumour antigen. The The pitopes and peptide immunogens may be used for prevention and/or treatment of infections (HIV, foot-and-mouth disease or malaria); for cancer immunotherapy; for inhibition of the action of luteinising hormone releasing hormone (LHRH) for contraception, treatment of hormone-dependent cancer, prevention of boar taint in meat, and immunocastration); for promoting the growth of animals; or for treating allergies or arteriosclerosis. Incorporation of a promiscuous Th (functional in genetically diverse subjects) into an immunogen improves capacity to induce a strong Thelper cell-mediated immune response, resulting in production of antibodies against a target antigen. Th can replace carrier represents a promiscuous Thelper epitopes. Sequence AY91121 represents a promiscuous Thelper epitopes. Sequence AY91121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel promiscuous T helper cell epitopes (Th), and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The Th epitopes and peptide immunogens containing them, are used to induce a T helper cell response, specifically against Plasmodium falciparum, cholesteryl ester transport
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           or human immune deficiency virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New artificial T helper cell epitope and antigenic site, for immunization against

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC represent synthetic Th epitopes based on the MVF Th epitope. Sequence CC ANY91143 represents a promiscuous The epitope from hepatitis B virus (HBV) CC surface antigen, and sequences AAY91144-Y91155 are synthetic epitopes (CC y91244 are antigenic peptides comprising an LHRH sequence Joined to a used in these LHRH antigenic peptides. AAY91201 is somatostatin, and ce pitope. AAY91207 are antigenic peptides comprising somatostatin, and complete comprising somatostatin, and complete comprising somatostatin and a Theorem (CC AAY91209-Y90211 are MVH Th epitope/CD4 CDR2 antigenic peptides which may be used to promote growth in complete comprising somatostatin, and complete comprising somatostatin and a Theorem (CC AAY91209-Y90211 are MVH Th epitope/CD4 CDR2 antigenic peptides which may version of a human IgE (immunoglobulin E) CH3 domain antigenic site, and complete comprision of a complete comprise this complete comprise comprising a comprise comprise this complete comprising a CETP comprise and AAY91221-Y91222 comprise the CC prevent or treat arteriosclerosis and cardiovascular disease. AAY91248-Y91251 and AAY91258-Y91257 are HIV-1 neutralising B-cell epitopes, and AAY91248-CC invasin protein epitope which may be used in a malaria vaccine. AAY91198 and AAY91273 are antigenic peptides comprising MVH Th and CC invasin protein epitope which may be used in a malaria disease. AAY91248-CC invasin protein epitope from Yersinia species, and hinge spacer peptide. CC invasin protein epitope from Yersinia species, and hinge spacer peptide, comprisine of which may be used in the antigenic peptide of the

Synthetic immunogenic peptides are provided in which a universal immune CC stimulator is linked to a peptide or protein hapten containing B cell cand/or cytotoxic T lymphocyte epicopes, giving a product which causes CC and/or cytotoxic T lymphocyte epicopes, giving a product which causes CC consists of (A) a promiscuous helper T cell epitope (Th) which elicits an CC immune response to the coupled peptide or protein. The stimulator CC immune response to the coupled peptide in members of a heterogeneous CC sequence from the invasin protein of Yersinia. Spacer amino acid The coupled peptide of Yersinia. Spacer amino acid The coupled peptide between the invasin and The CC domains and between the immune stimulator and hapten components. When the CC containing immunogenic peptide as above in which the This a structured CC containing immunogenic peptide as above in which the This a structured CC vaccine for treating e.g. prostatic hyperplasia, androgen-dependent Denign uterine tumours, recurrent functional ovarian cysts, (severe) conduction of infertility. (Updated on 25-MAR-2003 to correct PN field.)

            The invention relates to novel promiscuous T helper cell epitopes (Th), CC and immunogenic peptides comprising the Th epitopes of the invention CC along with B cell epitopes. The Th epitopes and peptide immunogens CC containing them, are used to induce a T helper cell response, CC specifically against plasmodium falciparum, cholesteryl ester transport CC protein (CETP) or HIV epitopes, but more generally against any pathogen, CC immunoreactive self-antigen or tumour antigen. The Th epitopes and CC peptide immunogens may be used for prevention and/or treatment of CC infinitions (HIV, foot-and-mouth disease or malaria); for cancer CC immunotherapy; for inhibition of the action of luteinising hormone (CIRRH) for contraception, treatment of hormone-cC dependent cancer, prevention of boar taint in meat, and immunocastration); for promoting the growth of animals; or for treating allergies or CC arteriosclerosis. Incorporation of a promiscuous Th (functional in CC genetically diverse subjects) into an immunogen improves capacity to groteins and pathogen-derived T helper epitope. Sequence AAY91121 (CC proteins and pathogen-derived T helper epitope. Sequence AAY91126 (CC protein and sequences AAY91122-y91142, AAY91226 and AAY91245-y91246 (CC v91244 are antigen; peptides comprising an LHRH sequence joined to a continue capacity of the protein and sequences AAY91147, AAY9125 are synthetic epitopes (CC v91244 are antigen; peptides comprising an LHRH sequence joined to a continue conti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Wang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC livestock. AAY91208 is a human CD4 CDR2-like domain antigenic site, and CD AX91209-Y90211 are MVH Th epitope/CD4 CDR2 antigenic peptides which may CC be used to prevent HIV infection of T cells. AAY90212 is a modified CC version of a human IgE (immunoglobulin E) CH3 domain, and AAY90213-Y90219 CC are Th epitope/IgE CH3 antigenic peptides which may be used in the CC treatment of allergies. AAY91220 is a peptide derived from foot and mouth CC disease virus (FMDV) VP1 capsid protein and AAY91221-Y91222 comprise this CC peptide and a Th epitope. AAY91223 is a Plasmodium falciparum CC circumsporozoite (CS) target antigen, and AAY91224-Y91225 comprise the CS cantigen and an MVF Th epitope and may be used in a malaria vaccine. CC AAY91228-Y91231 represent CETP-derived peptides and AAY91232-Y91241 are CC immunogens comprising a CETP peptide and a Th epitope which may be used CC to prevent or treat arterioses and cardiovascular disease. AAY91240-CC and AAY91252-Y91257 are HIV-1 neutralising B-cell epitopes, and AAY91240-CC and AAY91258-Y91273 are antigenic peptides comprising MVH Th and CC HIV-1 B-cell epitope which may be used as a component in an anti-HIV-1 CC vaccine. AAY9128 and AAY91299 are respectively an immunostimulatory companies of the invention (Thomated on 1-2-CFP 2001 to the of which may optionally be used in the antigenic peptides of the invention of the component of the component on the component of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

The invention relates to novel promiscuous T helper cell spitopes (Th), cc along with self epitopes. The Th spitopes of the invention cc along with self epitopes. The Th spitopes and peptide immunogenis specifically against plasmodium falciparum. Coblesters of the invention containing them, are used to induce a T helper cell process and specifically against plasmodium falciparum. Coblesters of the immunogenis specifically against plasmodium falciparum. Coblesters of the process and infections (HIV, foot-and-mouth disease or malaria); for cancer releasing hormone (IAHH) for contraception, treat, and dismunoces are peptide immunogenis may be used for prevention of interinsing hormone of specific and the process of the action of interinsing hormone. Induce a strong the growth of animals or for the interinsing hormone of specific production of antibotics against a target antigen. The animumocastration of induce a strong T helper cell-mediated immunogenism. The can replace carrier of proteins and pathogen-derived T helper spitopes. Sequence AV91127 to protein and sequences AV91127-791142, AV9125 and AV9125-791246 and AV9126 protein and sequences AV91121 approximate the first protein and sequences av91144 average antigen; and av91221 and AV91224-791242 are protein and sequences av91197 is the Lith trayet antigenic peptide comprising antigenic peptides. AV9127 are antigenic peptides. AV9127 and AV9127 are antigenic peptides and avaluation of animal period and avaluation of animal period and avaluation and avaluation and avaluation of animal period and avaluation an

ID AAY68
The present sequence represents a peptide immunogen comprising an invasin commain immunostimulatory peptide of Yersinia sp., a synthetic helper T cell (Th) epitope and a target antigen, luteinising hormone-releasing cell (Th) epitope and a target antigen, luteinising hormone-releasing cell (LHRH). The synthetic In epitope is derived from a structured synthetic antigen library (SSAL) designated SSAL1 Th1. SSAL Th1 is celles virus. The peptide immunogens cause induction of a specific cell immunogens cause induction of a specific cell immunogens cause induction of a specific cell spermatogenesis, ovulation, oestrus, sexual development and secretion of spermatogenesis, ovulation, oestrus, sexual development and secretion of expermatogenesis, rovision of a promiscuous T helper epitope (which is cell muniogenicity to the B cell epitopes of the target antigen and thus high cell muniogenicity to the B cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen. The peptide immunogens of the cell epitopes of the target antigen and thus high cell epitopes of the target antigen. The peptides of the cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the target antigen and thus high cell epitopes of the targ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptide immunogen containing luteinizing hormone-releasing hormone antigen slite and helper T cell epitope, for e.g. contraception and treatment of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      luteinising hormone-releasing hormone; spermatogenesis; ovulation; oestrus; sexual development; sex hormone; promiscuous T helper epitope; vaccine; contraceptive; hormone-dependent tumour; prostate cancer; breast cancer; endometriosis; boar taint; meat quality; invasin domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim

          The invention relates to novel promiscuous T helper cell epitopes (Th), CC and immunogenic peptides comprising the Th epitopes of the invention CC along with B cell epitopes. The Th epitopes and peptide immunogens CC containing them, are used to induce a T helper cell response, generating them, are used to induce a T helper cell response, CC specifically against plasmodium falciparum, cholesteryl ester transport protein (CETP) or HIV epitopes, but more generally against any pathogen, CC immunoreactive self-antigen or tumour antigen. The Th epitopes and CC peptide immunogens may be used for prevention and/or treatment of CC infections (HIV, foot-and-mouth disease or malaria); for cancer CC immunotherapy; for inhibition of the action of lutelnising hormone (CIPR) for contraception, treatment of hormone CC dependent cancer, prevention of boar taint in meat, and immunocastration); for gromoting the growth of animals; or for treatment of hormone CC arteriosclerosis. Incorporation of apromiscuous Th (functional in CC genetically diverse subjects) into an immunogen improves capacity to CC induce a strong T helper cell-mediated immune response, resulting in CC proteins and pathogen-derived T helper epitopes. Sometostatin immunogens may be used to promote growth in and clivestock. AAY91208 is a human CD4 CDR2-like domain antigenic site, and CA AAY91209-Y90211 are WNH Th epitope/CD4 CDR2 antigenic peptides which may CD be used to prevent HIV infection of T cells. AAY90212 is a modified CC version of a human IgE (immunoglobulin E) CH3 domain, and AAY90213-Y90219 CC are Th epitope/IgE CH3 antigenic peptides which may be used in the CC disease virus (FMDV) VP1 capsid protein and AAY91221-Y91222 comprise this CC peptide and a Th epitope. AAY91223 is a Plasmodium falciparum CC circumsporozoite (CS) target antigen, and AAY91224-Y91225 comprise the CS antigen and an MVF Th epitope and may be used in a malaria vaccine. CAAY91228-Y91231 represent CETP-derived peptides and AAY91232-Y91241 are cimmunogens comprising a CETP opetide and a Th epitope which may be used CC oprevent or treat arteriosclerosis and cardiovascular disease. AAY91247 cc and AAY91252-Y91257 are HIV-1 neutralising B-cell epitopes, and AAY91248-Y91251 and AAY91259 are respectively an immunostimulatory colored by the cell epitope which may be used as a component in an anti-HIV-1 crossin protein epitope from Yersinia species, and hinge spacer peptide. Doth of which may optionally be used in the antigenic peptides of the color which may optionally be used in the antigenic peptides of the color which may optionally be used in the antigenic peptides of the color which may optionally be used in the antigenic peptides of the color which may optionally be used in the antigenic peptides of the color which may optionally be used in the antigenic peptides of the color which may optionally be used in the antigenic peptides of the color which may optionally be used in the antigenic peptides of the color which may optionally be used in the antigenic peptides of the color which may optionally be used in the antigenic peptides of the color when the color which may optionally be used in the antigenic peptides of the color when the color which may be used in the an

AAY91156-Y91196, AAY91227 and AAY91242-Y91244 are antigenic peptides comprising an LHRH sequence joined to a promiscuous Th epitope. AAY91197 is the LHRH target antigenic peptide used in these LHRH antigenic peptides. AAY91200 is somatostatin, and AAY91201-Y91207 are antigenic peptides comprising somatostatin and a Th

Containing them, are used to induce a Thelper cell epitopes (Th), and immunogenic peptides comprising the Thepitopes and peptide immunogens containing them, are used to induce a Thelper cell response. Containing them, are used to induce a Thelper cell response. Containing them, are used to induce a Thelper cell response. Containing them, are used to induce a Thelper cell response. Containing them, are used to induce a Thelper cell response. Containing them, are used to induce a Thelper cell response. Containing them, are used to induce a Thelper cell response. Containing them, for inhibition of the action of Intentialing bormone (LiRH) for contraception, treatment of hormone containing the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or for treatment of hormone contained the growth of animals; or growth of anim
                                             ARY91228-Y91231 represent CETP-derived peptides and ARY91232-Y91241 are immunogens comprising a CETP peptide and a Th epitope which may be used to prevent or treat arteriosclerosis and cardiovascular disease. ARY91247 and ARY91257 are HIV-1 neutralising B-cell epitopes, and ARY91248-Y91251 and ARY91257 are antigenic peptides comprising WH Th and HIV-1 B-cell epitope which may be used as a component in an anti-HIV-1 vaccine. ARY91198 and ARY91199 are respectively an immunostimulatory invasin protein epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the antigenic peptides of the invention. The present sequence represents a peptide immunogen comprising an invasin CC domain immunostimulatory peptide of Yersinia sp., a synthetic helper T CC cell (Th) epitope and a target antigen, luteinising hormone-releasing CC hormone (LHRH). The synthetic Th epitope is derived from a structured Synthetic antigen library (SSAL) designated SSAL Thl. SSAL Thl is modelled after a promiscuous epitope taken from the F protein of the CC measles virus. The peptide immunogens cause induction of a specific immune response to LHRH which is involved in regulation of spermatogeness, ovulation, oestrus, sexual development and secretion of sex hormones. Provision of a promiscuous T helper epitope (which is functional in genetically diverse subjects) provides optimum commonal in genetically diverse subjects) provides optimum commiscity to the B cell epitopes of the target antigen and thus high antibody titres against the target antigen. The peptide immunogens of the invention are used to vaccinate against mammalian LHRH, for use as CC invention are used to vaccinate against mammalian LHRH, for use as CC control of hormone-dependent tumours (cancer of prostate or breast, also endometriosis); to prevent boar taint (and improve meat quality) and for immunocastration

The invention relates to novel promiscuous T helper cell epitopes (Th), CC and immunogenic peptides comprising the Th epitopes of the invention CC along with B cell epitopes. The Th epitopes and peptide immunogens CC containing them, are used to induce a T helper cell response, specifically against plasmodium falciparum, cholesteryl ester transport protein (CETP) or HIV epitopes, but more generally against any pathogen, CC immunoreactive self-antigen or tumour antigen. The Th epitopes and communogens may be used for prevention and/or treatment of infections (HIV, foot-and-mouth disease or malaria); for cancer communotherapy; for inhibition of the action of luteinising hormone (CIARH) for contraception, treatment of hormone creleasing hormone (CIARH) for contraception, treatment of hormone-creleasing hormone (CIARH) for contraception, treatment of hormone-creleasing hormoting the growth of animals; or for treatment of hormone-creleasing hormoting the growth of animals; or for treatment of hormone-creleasing hormoting the growth of animals; or for treatment of area subjects) into an immunogen improves capacity to conduct a strong T helper cell-mediated immune response, resulting in production of pathogen-derived T helper spitopes. Sequence AAY91121 (represents a promiscuous T helper epitopes. Sequence AAY9126 (represent synthetic Th epitopes based on the MVF Th epitope. Sequence CC AAY9143 represents a promiscuous Th epitope from hepatitis B virus (HBV) contrace antigen, and sequences AAY9114-Y91155 are synthetic epitopes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         吊
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Meas.

derived from this HBV epitope. AAY91156-Y91196, AAY91227 and AAY91242-Y91244 are antigenic peptides comprising an LHRH sequence joined to a promiscuous Thepitope. AAY91197 is the LHRH target antigenic peptide used in these LHRH antigenic peptides. AAY91200 is somatostatin, and AAY91201-Y91207 are antigenic peptides comprising somatostatin and a Th

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC epitope. Somatostatin immunogens may be used to prowth in and CC livestock. AAY91208 is a human CD4 CDR2-like domain antigenic site, and CC AAY91209-Y90211 are MVH Th epitope/CD4 CDR2 antigenic peptides which may CC be used to prevent HIV infection of T cells. AAY90212 is a modified CC version of a human IGE (immunoglobulin E) CH3 domain, and AAY90213-Y90219 CC are Th epitope/IGE CH3 antigenic peptides which may be used in the CC treatment of allergies, AAY91220 is a peptide derived from foot and mouth CC disease virus (FMDV) VP1 capsid protein and AAY91221-Y91222 comprise this CC peptide and a Th epitope. AAY91223 is a plasmodium falciparum CC circumsporozoite (CS) target antigen, and AAY91221-Y91222 comprise the CS antigen and an MVF Th epitope and may be used in a malaria vaccine. CAAY91228-Y91231 represent CETP-derived peptides and AAY91232-Y91241 are CC AAY9128-Y91231 represent CETP-derived peptides and AAY91232-Y91241 are CC AAY9128-Y91257 are HIV-1 neutralising B-cell epitopes, and AAY91248-CC and AAY91258-Y91273 are antigenic peptides comprising MVH Th and CC HIV-1 B-cell epitope which may be used as a component in an anti-HIV-1 crassin protein epitope from Yersinia species, and hinge spacer peptide, coth of which may optionally be used in the antigenic peptides of the coth of which may optionally be used in the antigenic peptides of the correction.                                                                                                                                                                                 The present sequence represents a peptide immunogen comprising an invasin colomain immunostimulatory peptide of Yersinia sp., a synthetic helper T CC cell (Th) epitope and a target antigen, luteinising hormone-releasing commone (LHRH). The synthetic Th epitope is derived from a structured complete antigen library (SSAL) designated SSAL1 Th1. SSAL Th1 is compared to the complete synthetic antigen library (SSAL) designated SSAL1 Th1. SSAL Th1 is compared to the compared to th

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                         243

P19196; 01-NOV-1990 01-NOV-1990 16-OCT-2001 -i- FUNCTION: Invasin is a protein that allows enteric bacteria penetrate cultured mammalian cells. The entry of invasin in cell is mediated by binding several beta-1 chain integrins. -i- SUBCELLULAR LOCATION: Outer membrane. -i- SIMILARITY: Belongs to the intimin/invasin family. STRAIN=8081C / Serotype O:8; MEDLINE=91041720; Pubmed=2233250; Young V.B., Miller V.L., Falkow S., S "Sequence, localization and function Yersinia enterocolitica."; Mol. ```
gonadoliberin precursor - mouse
N;Alternate names: gonadotropin-releasing hormone (GnRH); luteinizing hormone
N;Contains: gonadoliberin; gonadoliberin-associated protein (GAP)
C;Species: Mus musculus (house mouse)
C;Date: 31-Dec-1993 #sequence_revision 18-Mar-1997 #text_change 09-Jul-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A;Molecule type: mRNA

Cell fusion protein precursor - porpoise morbillivirus

N.Alternate names: F protein

C;Species: porpoise morbillivirus

C;Cate: 19-Mar-1997 #sequence_revision 19-Mar-1997 #text_change 09-Jul-2004

C;Accession: S47034

R;Bolt, G.; Gottschalck, E.; Blixenkkrone-Moeller, M.; Wishaupt, R.G.A.; Welsh, M.J.; Easubmitted to the EMBL Data Library, July 1994

A;Description: Nucleotide sequence comparisons of the F and M genes of cetacean morbilling Reference number: S47034

A;Accession: S47034

A;Molecule type: mRNA

A;Residues: 1-552 <BOL>

A;Cross-references: UNIBROT:Q66147; EMBL:X80757; NID:g520639; PIDN:CAA56731.1; PID:g5206

A;Note: the source: isolate Ulster 88

A;Note: the source is designant and as Cetacean morbillivirus
